

Outline the different tools / languages to query big data?

What are the tools that are used to extract big data

Explain the difference between the traditional data and smart data.

What are the different features of Big Data Analytics?

What are the challenges of IoT with respect to BDA. List them in detail.

What connects IoT devices to the cloud, in order to aggregate the data, translate between protocols and process data before data sending it on?

Smart Fitness clothing mainly has which device, does it come under data gathering, data analytics?

Differentiate between Cloud computing, Edge computing and Fog computing.

What are the different challenges in Managing Big Data Metadata in Smart Grids?

Explain the Key Attributes of the Fog Platform.

Explain about the different components in fog architecture.

What are the key differences between "Spatial Research Data Infrastructure" and "Spatial Data Infrastructure (SDI)"?

Which techniques do you recommend to be combined with a technique in Big Data Analytics?

Explain Spatial Modelling.

How data from internet connected devices can be georeferenced?

What are main differences between IOT and big data in recommendation system?

geographical concepts and spatial technology to iot questions

Explain spatial function and model

Explain fog computing in detail
